

# Ecotoilets for Churches

## RELIEF IS AT HAND

You can have a toilet in a cabin, installed and ready to use within half an hour of arriving on site.

You can install a toilet within your own building in a matter of hours, or install a standard or fully accessible cabin to complement your own structure, wherever you need it.

No pits to dig, no sewage outlet required, no water to flush, no electrical supply needed, no chemicals to harm the environment and no smell, ever.

Many churches and chapels are benefitting from their 'Ecotoilets'

# The Choice

The usual choice is the Separett Villa, a waterless separating compost toilet. This looks and feels like a WC, but has no flush. Instead, the liquid is diverted directly from the toilet into a drain or soakaway. In this way, any amount of use can be accepted and this excellent fertiliser is fed into the ground unseen and without smell. The solid matter and toilet paper are collected in a bin within the toilet, which can in time be simply transferred to a composter or compost heap. This will produce a safe soil improver, excellent for plants.

**SEPRETT VILLA**

From £625 including VAT

For churches where no-one wants to create compost, or where minimum disturbance of the building is important, you can select the Separett Flame incinerating toilet. This uses 230v electricity to incinerate everything to a small quantity of ash, which can be spread on the ground or put in a waste bin.

**SEPRETT FLAME**

From £3250 including VAT

Compare these choices to the installation of WCs, for which you not only need a water supply, but also a septic tank or mains drainage connection. This can cost tens of thousands of pounds and involve complex and time consuming excavation of the churchyard, with all its archaeological implications. Thereafter, you will have ongoing water bills, the environmental harm of creating sewage and you also risk frost damage and flooding. A cheaper alternative may be a trench arch, but this severely limits the use of the toilet for the future and still requires substantial excavation, as well as possible pollution of the surroundings.

Ecotoilet - only option here

Ecotoilets are an excellent way for a Christian community to show its concern for God's creation and are a contribution to becoming an 'Eco-church'.
