OUR VISION

Back at the beginning of everything, after the earth, the sky and sea, the animals, plants and humans, Scripture tells us that God stood back and, looking at this glorious diversity, “He saw everything he had made, and indeed, it was very good.” Not iffy, not so-so, not a first draft, but very good. Creation is very good.

This good creation is a gift. It is given by God as an expression of his overwhelming abundance of goodness and love, shared because divine love is too generous to be kept hidden away for its own pleasure. Creation is a gift with a purpose: it is to be enjoyed because it is an expression of God’s joy and glory; cherished because it needs care and attention, and shared because there is enough for everyone, but only if none of us take more than we need.

In Pope Francis’ words the destiny of this glorious gift of a good creation is *‘bound up with the mystery of Christ, present from the beginning because “All things have been created through him and for him (Col 1:16)”’*¹.

But we don’t have to look far to see that we have failed to properly enjoy, cherish and share creation and that the earth, sky and sea, and the plants and animals that live in them are suffering as a result, as are the poorest people around the world. We face a global climate and biodiversity crisis, which are already impacting the coastal communities of Cornwall, and levels of global injustice and human suffering that shame us all.

This isn’t just a practical problem. In the Bible it is often the land that cries out against human sin and selfishness. The prophet Hosea, in words that are profoundly prescient, put it like this *‘The land mourns, and all who live in it languish; together with the wild animals and the birds of the air, even the fish of the sea are perishing.’*²

The causes of the current crises are deep and complex, at their root lies the same problem that tempted Adam and Eve immediately after God created his good universe, and the problem that led to Hosea’s challenge; the temptation to run the world for our own purposes and without care for the Creator and his purposes. The environmental crisis has spiritual roots; it is about ultimate meaning and purpose, how we treat our neighbour, both near and far, and how we understand the nature of human flourishing – and these are all issues of faith and spirituality. Sir Ghillian Prance, previous Director of Kew Gardens and Scientific Director of the Eden Project, put it like this; *‘Science alone will not be able to resolve the situation,*

*because it is a moral, spiritual and ethical problem, requiring major changes in our behaviour.’*³

The solution, which we are called to be part of, starts with God and is lived out by disciples of Jesus Christ, in whom we are called to be a ‘new creation’. It is by faith and action together that God’s very good creation can be restored.

This diocese has long been committed to creation care. Christians in Cornwall have long had a deep connection to the land and sea, expressed richly in the Celtic spiritual tradition. Cornwall has long been connected to the wider world and had a care for those suffering from injustice.

As the Church of England in Cornwall and as the generation responsible for God’s creation at this time, called to enjoy, cherish and share the gift of God’s goodness, we commit ourselves to playing our part in the spiritual and practical renewal that is required, we are ready to repent and to change and to make the sacrifices that will be required. We will cherish creation, cut carbon and speak up.

OUR PRIORITIES

There are many ways in which we might choose to act on this commitment, but our resources are limited and we know that churches and organisations are more effective when they choose to do a few things and to do them well. Following a process of consultation and discernment, we have therefore named three specific commitments or priorities for our continued and renewed work on creation care.

Cherish creation: We will encourage the diocese at every level⁴ to care for those parts of God's good creation for which we have responsibility, stewarding them for the benefit of plants, animals and fungi biodiversity.

As well as a climate emergency, we also face an ecological crises, with a dramatic loss of wild spaces and species. Climate change and biodiversity loss are intimately connected. We will therefore encourage individuals to care for the parts of creation that they have involvement with and responsibility for; we will encourage and equip church communities to maximise biodiversity in land in their care. At diocesan decision making level⁵, recognising the complex balance of demands on land use, including our commitment to the poor, the need to operate within statutory frameworks and to make a financial return, we will consider the place of wildlife and the need to boost biodiversity in every decision. To support this, we will establish and build on partnerships with other churches and relevant external experts to help us think through the complex decisions that need to be made.

Cut carbon : We will cut our carbon footprint year on year and to net zero by 2030.

We recognise, along with the rest of the Church of England, that we, individually and corporately, need to act urgently on the climate crisis, which is the single greatest environmental challenge before us, and cut out carbon emissions to net zero.

We recognise that this is a significant challenge and we take responsibility for the part that we alone can play. We acknowledge that if we are to speak boldly and prophetically on creation care, we need to be putting our own house in order and to be living in ways that are coherent with this aim.

We know that the missional call made to *strive to safeguard the integrity of creation, and to sustain and renew the life of the earth*⁶ is integral to and connected with our overall mission as the church of Christ, and that achieving this target is therefore about discipleship, evangelism, prayer, worship and the study of Scripture as well as practical action.

Speak up : At every level of the diocese, we will speak and act boldly to promote the enjoyment, cherishing and sharing of God's good creation and, where possible and resources allow, we will work in partnership with others who share the same aims.

We recognise that we have a part to play alongside others in this work; individuals, groups, ecumenical partners and organisations. We will therefore encourage every level of the diocese to act boldly to put our own house in order, to work in partnership with others on creation care, listening to their experience and expertise, using our voices for persuasion and protest, and to build partnerships for action.

We will speak boldly and publicly, taking a lead in public discussion, debate and action, especially here in Cornwall. We will work ecumenically and beyond our church, advocating for carbon cutting and for nature and supporting those seeking creative solutions to the challenges we face. In particular we will speak of God's love for his whole creation, of the spiritual and moral dimension to the climate crisis and ensure this is seen as an issue of justice for the poorest and most vulnerable.

OUR APPROACH TO CHANGE

Our approach is based on the following principles and process.

1 **Practical change starts with a compelling vision.**

The clarity and persuasiveness of our vision is critical, as it is the basis of telling a coherent and compelling story illustrating why our response to the ecological and climate crises matters, and in particular, why it matters to us as Christians. This vision needs to be rooted in Scripture and the Christian tradition, to outline the problem and the solution, it needs to be sufficiently broad to include the whole diocese and sufficiently focussed to give a clear direction and it needs to invite everyone to play their part. Above all, this vision needs to be theologically and spiritually rooted.

2 **The priorities are there to help us say 'no'.**

As we cannot do everything, we will focus on doing these few things and doing them consistently, relentlessly and well, and we will make the difficult decision say 'no' to other choices (even to good choices).

3 **There is a price to pay.**

In order to meet these targets we will have to pay a price, both financially and in opportunities foregone. That price will be paid by different people and groups at different times and so needs to be chosen, supported and encouraged rather than forced. We will pay particular attention to ensuring this price is not paid by those who are already poor.

4 **Groups and organisations do things differently when individuals start to imagine the world differently and to behave differently.**

While systems and structures matter, it is what people think, hope for and believe that brings real change. Changes in mindset and imagination then need to be supported with practical steps for behavioural change. This is how we understand the process of change,

recognising that change often begins and embeds when people take action, and that it is often a cyclical rather than linear process.

5 **The Diocese of Truro is a complex federation of individuals, communities, networks and groups, each with their own areas of responsibility and accountability, and with different priorities and needs.**

This means a clear shared vision, building partnerships, negotiating decisions and being mutually accountable will be the key tools in bringing about change. It also means that different parts of the diocese will, rightly, focus on different specific areas of the strategy. The aim is not for everyone to do everything, but for everyone to do something that contributes to the priorities. Diverse responses to clear goals will be encouraged.

6 **Change needs to be both bottom up and top down.**

Creativity and practical change are most likely to happen when people and groups take responsibility for themselves and their own areas of care and concern, and are given resources and support to do so. This also needs consistent public leadership and clear direction from those called to lead the diocese, including in their own behaviours.

7 **Consistent and lasting change.**

This requires clear targets, which measure what matters most and which are overseen by a clear leadership structure which has authority to make decisions.

OUR STRATEGY

1 Share the vision.

We will communicate our vision to Cherish Creation, Cut Carbon and Speak Up. Recognising that each part of the diocese has a different set of priorities and needs and will contribute to the overall vision in different ways. The vision will often be best shared through stories, Scripture, prayer and worship, and our communications strategy will therefore focus on story telling and faith. Everything we do will tie into the three priorities and the underpinning vision, in particular to making connections between faith and action for creation. We will use this grid to monitor and encourage focussed and consistent attention to the priorities, but in ways that can be chosen locally.

2 Lead and act.

Those with responsibility for leadership, at every level of the diocese, will be supported and encouraged to grow in their understanding of the issues and in theological, practical and public responses, both personally and for those they lead. Where possible, we will use existing systems for this, for instance in deanery planning, Archdeacons Visitations and ministerial training.

3 Provide a route map for personal, community and organisational change.

Offering people and communities clear steps that help them cut carbon, cherish creation and speak up. We will do this through resources like the We will do this through resources and support such as Eco Church Awards, Living Churchyards, practical help and vocational training such as Leaders for Creation Care. We will review and revise these resources as an ongoing process.

4 Empowering local champions.

We will grow the Creation Care Network and equip our Creation Care Champions to be vision carriers and local change leaders who will advocate for the diocesan priorities of cherishing creation, cutting carbon and speaking up.

5 Green churches.

We will provide resources and support for church communities to design and implement their plan for action. This will include technical support for reducing carbon emissions.

6 Prayer and worship.

Because these are spiritual rather than solely practical challenges, we will resource peoples prayer, bible study and worship for creation care.

7 Work in partnership across the diocese.

We will work closely with the formal decision making bodies that have responsibility for the resources of the diocese as a whole (including Glebe, property, investments and finance) working to bring the diocesan priorities onto their agendas and decision making processes.

8 Set targets.

Because we know how easy it is to start off well, and then to be distracted, we will set clear targets for each of the priorities, and design an accountability structure to monitor them. On a local level, churches that are able to clearly demonstrate their commitment to Creation Care will be able to access future Net Zero funding streams.

9 Resource positive change.

Since the creation and adoption of this pioneering Environment Strategy and Vision in 2020 much has changed. Through collaborative partnerships with the National Church and Exeter Diocese we have been able to secure funding that has hugely increased our ability to support the local church. All of our highest Co₂ emitting churches have had energy and decarbonisation audits. We have successfully recruited a Cut Carbon Support Officer for Churches, the same for Schools, a Church Buildings Support Officer to work along side the DAC and a Schools' Environment Officer. This now forms the Buildings Environment & Land team (BEL). We have established the now thriving Creation Care Network which gathers monthly to support and care for our voluntary, parish based Creation Care Champions. This forum is the heartbeat of positive change and a reflowering of God's incredible creation here in Cornwall and beyond.

GOVERNANCE & RESOURCES

For all of this to happen, we have the following structure and groups in place

1 An Environment Committee to oversee the implementation of the vision and priorities.

1. The committee is made up of people from key parts of the diocese including the cathedral, parishes, Change and Renewal, the Bishop's Diocesan Council (BDC), the Diocesan Board of Education and Church House. Others with specialist skills or expertise, including external partners are invited as required;
2. The role of the committee is to hold and hone the vision, to set targets and to receive reports on progress, to oversee the key work of sharing the vision and communication, to ensure good partnership and collaboration within and beyond the diocese;
3. The committee is co-chaired by the Bishop of St Germans and a lay Chair, through whom it reports to the BDC;

2 Communications & Operations support. This requires some time from the diocesan communications team to ensure the vision is shared consistently and widely, especially through stories of individual and collective creation care. The Operations team also support on logistics.

AWARDS

71 churches engaged with Kernow Green Church Awards (KGCA).
21 churches awarded KGCA.
92 engaged with Eco Church Award (ECA) - 2 golds, 12 silvers, 30 bronze awards & 1 Bronze Church House, 1 bronze Cathedral, 8 Church Building Support Network online meetings

EVENTS

250+ annual attendance at 11 Creation Care Network Gatherings.
9 deanery visitations with creation care representation.
1 Creation Care Service of thanks & celebration
8 Church Building Support Network online meetings
90 people attended 2 church buildings workshops.

£500K+ grants sourced

GRANTS

£104,165 externally sourced for CBSO for two years.
£137,250 externally sourced for MR&I grants.
£20k in professional fees grants issued.
£58,850 externally sourced for Quick Win grants.
£126,500 externally sourced for Cut Carbon Support Officers for schools & churches.
2 Demonstrator Church grant award secured (£65,000).
1 boiler hardship grant obtained
£75,000 match funded for 12 Give to Go Green Churches.
£50,000 for pilot parsonage net zero project.

We are a Bronze Eco Diocese

VISITS

135 Church Buildings Support Officer (CBSO) church visits.
68 Cut Carbon Support Officer (CCSO) church visits.
45 DAC visits.

101 Creation Care Champions

AUDITS & REPORTING

243 (87%) churches completed the Energy Footprint Tool.
70 church decarbonisation audits.
44 school decarbonisation audits completed.

INVESTMENTS

Signed the Green Investment Declaration & disinvested from fossil fuels.

First Glebe Strategy sets environmental objectives

1,070 pupils enjoyed Creation Care workshops

SCHOOLS

32 schools supported on their Eco-Schools journey.
20 churches supported to offer creation care workshops to their local school.
130+ pupils/ 18 schools at Eco-Conference.
1 online commissioning service for school's eco committees.

PROPERTIES

36 clergy homes with new energy efficiency improvements.
26 properties now EPC A (from zero in 2021).
37 now A or B (up from 10 in 2021).
18 fewer EPC D and E rated properties than in 2021.

250 tonnes of carbon saved from clergy housing

Net Zero Carbon 2030

END NOTES

1. Pope Francis' Encyclical Letter, *Laudato Si*

2. Hosea 4:1-3

3. Quoted in Dave Bookless, *Planetwise*

4. Which includes: parish churches big & small, home groups, parent & toddler sessions, Messy Church, Transforming Mission, the cathedral, the Glebe portfolio, finance, property and investment teams, church schools, prayer groups, Synods of different sorts, Church House, Bishop's Diocesan Council (BDC), Episcopal College, deaneries, church leadership teams.

5. Which includes Synod, BDC, Episcopal College, Glebe, property, finance and assets, investments and Diocesan Advisory Committee (DAC).

6. The fifth of the 5 Marks of Mission that underpin the Anglican theology of Mission.
